

Maximise the value of your SAP systems through efficient data volume management

SAP archiving allows you to drive cost savings, support digital transformation and address business risks

Key benefits

Archiving has always delivered value, but as customers move to the cloud or RISE with SAP, it's now an essential requirement.

Simplify migration

Reducing your data footprint in preparation for your migration to S/4HANA, the cloud or RISE with SAP can significantly reduce the costs associated with storage and speed up the migration process.

Reduce costs

Dramatically reduce infrastructure and maintenance costs by archiving legacy SAP data to a compressed archive data store. Streamline compliance, retention, and reporting across legacy data sources.

Improve system performance

Minimise database growth and improve performance. Less data on the active database improves day-to-day operations, from faster system response times to reduced downtime during updates and backups.

Meet regulatory compliance

Ensure availability and authenticity of archived data information in accordance with regulatory compliance, governance, and business requirements. Prevents data from being modified or prematurely deleted.

50%

Typically 50%+ reduction in data volume stored

£1M

Up to £1m in yearly SAP hyperscaler infrastructure savings

18kTB

18,000TB of storage space saved by Proceed customers

When to archive

Start as soon as possible and continue optimising your archiving. Archiving is especially useful in the following scenarios:

- To improve system performance
- Moving to the cloud or RISE with SAP
- To ensure regulatory compliance
- Moving to S/4HANA and SAP HANA
- With mergers and acquisitions
- Part of your day to day

CRODA

Migrating our SAP systems to HANA was challenging because of the high operational cost of running a 3.4TB database size in memory. Reducing the database size to below 0.5TB in less than 3 months paid for the archiving project with an ROI of below 2 years. We have enjoyed working with Proceed Group – they were key in delivering this project and their ongoing support is very valuable.

Paul Knoester, Group IT Operations Director, Croda International
